Summary

Backend engineer with six years building payment and identity systems at scale. Comfortable owning a service end to end, from schema to on-call.

Experience

Staff Software Engineer, Wayfair — Boston, MA Mar 2023 – Present

- Led the migration of the checkout ledger from a single Postgres instance to a sharded topology, cutting p99 write latency from 340ms to 48ms across 12 shards with no customer-visible downtime.
- Designed an idempotency layer for payment retries that eliminated roughly 4,200 duplicate charges per month.
- Mentored four engineers through promotion; ran the team's design review process.

Senior Software Engineer, Toast — Boston, MA

Jun 2020 – Feb 2023

- Built the restaurant onboarding API in Java and Kotlin, serving 18K+ merchants and sustaining 2.5K requests per second at peak.
- Cut nightly settlement job runtime from 6 hours to 40 minutes by replacing row-by-row processing with batched Spark stages.
- Introduced contract testing across nine services with Pact.

Software Engineer, Vistaprint — Waltham, MA

Jul 2018 – May 2020

- Rebuilt the product configurator's pricing engine in Python, reducing quote errors by 31% year over year.
- Migrated 40 legacy cron jobs onto Airflow with alerting and retries.

Education

Northeastern University — Boston, MA

Sep 2014 – May 2018

Bachelor of Science in Computer Engineering

Skills

Languages: Java, Kotlin, Python, Go, SQL, TypeScript

Data: PostgreSQL, Kafka, Spark, Redis, Snowflake

Infrastructure: AWS, Kubernetes, Terraform, Datadog, PagerDuty

Practices: Distributed systems, on-call, contract testing, mentoring
